

Safety from a single point

TN Safe is a solution designed to monitor and manage in a complete and simple manner the obligations regarding health and safety in the workplace established by **Legislative Decree 81/08**

Dematerialize documents

Simplify the safety processes

Improve the company sentiment

To deploy **TN SAFE** it is sufficient to have an Intranet / Internet network and, with only one license, even complex company groups can be managed, both if each company independently develops safety management, and if the holding manages centrally coordination policies.

TN Safe is based on open software architecture

The process model follows the basic elements of the guidance provided by the voluntary OHSAS 18001 standard. For this reason, the system is a valid support to certified companies, and to those involved in achieving certification.

- Working activity
- Connected risks
- Staff training
- Individual Protection Device
- Machines and Equipment
- Chemical Risk
- Internal Audit
- Activity Planning and Register
- Medical and Sanitary Surveillance
- Management of Risk Assessment Documents
- Management of DUVRI and DUVRI
- Parametric Reporting
