Connecting mobility technology

An innovative Connected Mobility Platform

Youmble

TopNetwork has created a division called “**Youmble**” specializing in the **IoT sector** and especially in the **Connected-Mobility sector**.

Youmble has developed an innovative solution that includes a **Black Box** with the analysis of the Driving Stile , Crash Alert and Crash Reconstruction ; an **Anti-Theft System** complete with the remote engine block via our Operations Center in the case of event or in case of Theft; veichle’s **Telemetry** with the acquisition , management and transformation in value-added services of all the parameters coming from the vehicle.

Yumble - Connecting Mobility Technology

Yumble is able to detect vehicles problems in a timely and precise way (crash, mechanical issue etc.). Furthermore, the **System** is attentive to the needs of the vehicle at all stages of life (maintenance , tires change , vehicle check, oil change, vehicle revision).

Black Box

Antitheft System

Vehicle Telemetry
and CRM

24H Operations
Center

Black Box

The Yumble **Black Box**, connected to the **OBD** socket , generates a multitude of opportunities for **dealers**, for **insurance** and for **vehicle owners**.

In case of accident , thanks to the data transmitted by the device, Yumble Operations Center provides immediate assistance (Tow Track contact for an immediate intervention, Rescue sending in case of illness, depannage).

Black Box is also a probative element in the event of an accident, with the exception that the Device is tampered or does not work properly (Article 132- Ter of the Insurance Code).

Antitheft System - Mobile App

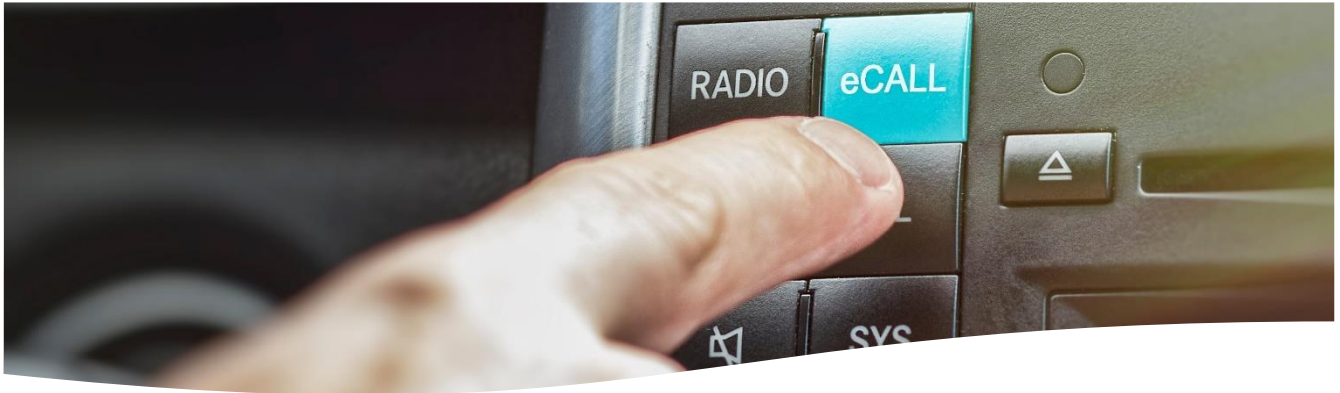

Yumble allows customer to locate his vehicle and protect it from **possible theft**. In case the thief removes the device from the **OBD** socket , the engine block will be activated and the operations center will warn instantly vehicles owner. In addition , to avoid theft , vehicles owner can, with a **simple click**, activate engine block even remotely.

Yumble includes a **mobile App** with simple commands and functions useful to the driver.

Thanks to Yumble Mobile App , the driver sees all the data of his vehicle in real time on his SmartPhone (health status, maintenances, position, communications from his dealer).

E-Call

Yumble includes the installation of the **E-Call** System on vehicles. With **Yumble** , vehicles registred before 31/03/2018 can also have the **E-Call Button**.

The Button , if pressed , immediatly alerts our 24H Operations Center , which identifies the position of the vehicle and , in case of need , can contact vehicle's WorkShop , Police , Emergencies or , on the place where car is located, send a Tow Truck for free.

Youmble - complies with legal requirements

Youmble, in addition to being a certified Automotive **Satellite Anti-theft System**, meets all the legal requirements and implementation regulations of the European Commission. All **Youmble's** Devices are equipped with a **Black Box** that records vehicle's activity with the analysis of the parameters of Driving Style, Crash Detection and Crash Reconstruction according with the Administrative Decree of the Ministry of Transportation.

Youmble's advantages

Not only **easy to install**

BUT MOST OF ALL

A Single Solution that offers Fleet Management Services , Black Box , Anti-Theft Satellite System, Active CRM , E-Call, Vehicle's Telemetry and Remote Diagnostic.
